Volume 1 / Issue 1

CHECK THIS OUT!

Did you know industrial hemp (*Cannabis sativa*) has been used as a source of fiber and oilseed, worldwide, to produce a variety of industrial and consumer products? Read all about it on page 2.

Edible industrial hemp seeds

HELLO AND WELCOME TO ALL!

Hello, friends! We are entering exciting times in southeastern North Carolina and we're glad you're here to experience this amazing journey with us.

As some of you may know, we recently were approved by the Drug Enforcement Administration and the North Carolina Department of Agriculture to import top quality certified industrial hemp seeds from Europe in support of the North Carolina Industrial Hemp Pilot Program.

What this means is that starting now Palomo Farms LLC is officially authorized to sell imported hemp seeds for cultivation research purposes to farmers who have been approved by the North Carolina Industrial Hemp Commission.

Furthermore, this will help with the study of marketplace opportunities for industrial hemp products in the State, which also means more employment opportunities for North Carolinians in the future.

We are now taking preorders for the 2017 crop, with a deadline of May 5th.

Don't delay and give us a call. We are now taking pre-orders for the 2017 crop, with a deadline of May 5th, 2017.

INDUSTRIAL HEMP SEEDS

How many industrial hemp seeds can you name? Below are a few of what we offer at Palomo Farms LLC. To find out more, visit our website at www.palomofarmsnc.com.

HEMP AND MARIJUANA ARE THE SAME, RIGHT?

You've heard the rumors, and yes, some of them are true. Industrial hemp and marijuana *are* from the same species of plant (*Cannabis sativa*); however, the two are from different cultivars that have been bred for different uses. Unlike marijuana, the psychotropic drug, industrial hemp is cultivated for the use in the production of a wide variety of products, such as health care items, nutritional supplements, fabrics and textiles, food and beverages, and other manufactured goods.

Another difference between the two lies in its tetrahydrocannabinol, or THC, concentration. Currently, medical marijuana has a THC content anywhere between 5-20%, while industrial hemp has a THC content no higher than 0.3%. If you would like to know more, check out the Federation of American Scientists at www.fas.org.
